

110/120V ELECTRIC PUMP

READ AND SAVE THESE INSTRUCTIONS

IMPORTANT SAFETY INSTRUCTIONS

When using an electrical pump, basic precautions should always be followed, including the following:

READ ALL THE INSTRUCTIONS BEFORE USING

DANGER - To reduce the risk of electric shock:

1. Always unplug the unit from the electrical outlet before cleaning.
2. This unit is a household inflator/deflator to be used with airbed, inflatable boat, etc.
3. This unit is not intended for continuous use, prolonged operation (over 30 minutes) can and will cause overheating and damage to the unit.

CAUTION - To reduce the risk of electric shock, do not expose to rain. Store indoors. Household use only!

WARNING - To reduce the risk of fire or electric shock, do not use this pump with any solid state speed control device. To reduce the risk of burns, fire, electric shock, or injury to persons:

- Unplug from outlet before putting on or taking off parts.
- Use this pump only for its intended use as described in these instructions. Do not use attachments not recommended by the manufacturer.
- Never operate this pump if it has a damaged cord or plug, if it is not working properly, if it has been dropped or damaged, or dropped into water.
- Keep the cord away from heated surfaces.
- Never operate the pump with the air openings blocked. Keep the air openings free of lint, hair, etc.
- Never drop or insert any object into any opening.
- Do not use outdoors.

- To disconnect, turn all controls to the off position, then remove plug from outlet.
- Do not use under wet conditions.
- This pump has a polarized plug (one blade is wider than the other). This plug will fit in a polarized outlet only one way. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician to install the proper outlet. Do not change the plug in any way.
- Keep this air pump away from children, small fingers may fit into inflation/deflation ports and cause serious injury to the child.
- Carefully follow instructions on items being inflated. Never exceed recommended pressures or do not over inflate. Over inflation may result in bursting of the item, possibly causing serious injury to yourself or others near by.
- Never leave pump unattended while in use.
- Do not attempt to repair or replace internal parts.
- Never allow sand, small rocks, etc. to be sucked into inflation or deflation port while operating.

TO INFLATE ITEMS

1. Connect plug into 120 volt AC outlet.
2. Use adapters as necessary to make the inflation port fit the item. Hold inflation port of pump to valve on item to be inflated and turn switch On "I".
3. As soon as the item is properly inflated, turn the pump switch Off "O"; install the plug in the valve of inflated item. Unplug the pump from the outlet, and store the pump in a dry location.

NOTE:

On larger items like inflatable boats and large air mattresses, the pump will fit directly into the inflation valves and provide faster inflation times. Use the appropriate adapter on small inflation valves as on small air mattresses, etc.

TO DEFLATE ITEMS

1. Connect plug to 120 volt AC outlet.
2. Open the valve on item to be deflated.
3. Attach adapter to the deflation port on the top of the pump.
4. Hold inflation port of pump to valve on item to be deflated and turn switch On "D".
5. As soon as the item is properly deflated, turn the pump switch Off "O". Unplug the pump from the outlet, and store the pump in a dry location.

NOTE:

On small inflation valves, the valve may have to be "pinched" with your fingers to open the flapper inside the valve and allow the air to escape.
